Welcome!

The OSR Wiki is a free repository of knowledge about Open Source Strokers as originally conceived by TempestMAx.

It is maintained and hosted by a community of volunteers using a simple platform called Bookstack. Information about strokers and related topics are organized into collections called *Books*. Just like normal books, OSR Wiki books contain *Chapters* and *Pages*. Books may also be placed onto *Shelves*.

You are currently reading the *Welcome!* page of the OSR Wiki book, which is on the Community shelf.

A list of all shelves is available here. You can view all books irrespective of shelf here.

All content on this site can be searched using the search box in the header. If you would like to contribute content please read the Guidelines for Contributing page.

Happy Stroking! □□
